**Economics, Sustainability, and Democracy: Economics in the Era of Climate Change (Routledge Frontiers of Political Economy)** Christopher Nobbs

How should we conduct economics in an era of climate change, natural resource depletion and population increase? These issues are systemic, and involve great uncertainties and long time horizons. This book contends that the free-market economics that has dominated capitalist democracies in recent decades is not up to the task; that the welfarist economics that preceded it, while preferable, also has inadequacies; and that what is required is an economics founded on ecological principles, greater respect for the laws of natural science, and a moral commitment to a sustainable future.

The book commences with an exposition of major aspects of orthodox macroeconomic and microeconomic theory. It then explores the bounds of orthodox theory in relation to ethics, liberalism, ideology, society, the international economy, globalization, and the environment, and seeks lessons for a future economics. Issues raised by natural resource use and climate change are given particular prominence. Many of the issues of critical importance in coming decades involve not private goods but public goods: goods which markets are ill-equipped to deal with. In the resolution of these issues political processes will need to be engaged. The availability to each individual of clean air, clean water and adequate sustenance, goods which cannot be provided for by economic production alone, are of central concern.

While acknowledging the importance of market processes, the author argues in favour of a more deliberative and democratic economy, the greater engagement of civil society, environmental human rights and responsibilities, and in favour of a World Environment Organization, change in the conduct of the World Trade Organization, and for economists to accept moral responsibility for the policies they advocate. Specific case studies are given and potential policies outlined.

This book will be of interest not only to economists but also to citizens generally and students concerned with public affairs.
