CNS and Behavioural Pharmacology: Proceedings of The Sixth International Congress of Pharmacology: 6th, v. 3 (Proceedings of the Sixth International Congress of Pharmacology ; v. 3)

CNS and Behavioural Pharmacology is the third volume of the proceedings of the Sixth International Congress of Pharmacology, organized by the Finnish Pharmacological Society and held in Helsinki, Finland, on July 20-25, 1975. Contributors focus on the findings concerning the central nervous system (CNS) and on the developments in behavioral pharmacology and related areas of research.

This volume has 33 chapters divided into five sections. After discussing the application of psychopharmacology to the conservation of wild animals such as ungulates, this book turns its attention to alcohol dependence and the interactions between neurotransmitters and the hypothalamic releasing hormones. The reader is methodically introduced to the pharmacology of emotive behavior, with emphasis on drug effects in mental and emotional disorders as well as the action of psychotropic drugs on emotions, motivations, and social behavior of animals. The final section is devoted to the pharmacological aspects of the cerebrospinal fluid-transport system. This section covers topics such as the metabolism of biogenic amines in the human CNS; the importance of dopamine metabolism for the clinical effects and side effects of neuroleptics; and composite transport systems for organic acids and bases in choroid plexus.

This book will be of interest to scientists representing all the major areas of pharmacology, including clinical pharmacology and toxicology, as well as to internists, psychiatrists, neurologists, and anesthesiologists.
