Venenos. Armas químicas de la naturaleza (La Ciencia Para Todos / Science for All) (Spanish Edition)

Juan Luis Cifuentes, Fabio Germán Cupul

Un veneno es cualquier sustancia que al ser introducida o al estar en contacto con un ser vivo, le produce un efecto o una serie de trastornos que dañan su equilibrio corporal y que lo pueden conducir hasta la muerte. En esta obra se estudian las plantas, los animales y los microorganismos que poseen la capacidad de producir veneno o de obtenerlo de fuentes externas, así como la composición química de su veneno, y se muestra que son parte importante en la investigación y cura de enfermedades, así como en el equilibrio y conservación de los ecosistemas.
