# Building a Recommendation System with R

*Suresh K. Gorakala, Michele Usuelli*

**Building a Recommendation System with R** Suresh K. Gorakala, Michele Usuelli

**Learn the art of building robust and powerful recommendation engines using R**

## About This Book

- Learn to exploit various data mining techniques
- Understand some of the most popular recommendation techniques
- This is a step-by-step guide full of real-world examples to help you build and optimize recommendation engines

## Who This Book Is For

If you are a competent developer with some knowledge of machine learning and R, and want to further enhance your skills to build recommendation systems, then this book is for you.

## What You Will Learn

- Get to grips with the most important branches of recommendation
- Understand various data processing and data mining techniques
- Evaluate and optimize the recommendation algorithms
- Prepare and structure the data before building models
- Discover different recommender systems along with their implementation in R
- Explore various evaluation techniques used in recommender systems
- Get to know about recommenderlab, an R package, and understand how to optimize it to build efficient recommendation systems

## In Detail

A recommendation system performs extensive data analysis in order to generate suggestions to its users about what might interest them. R has recently become one of the most popular programming languages for the data analysis. Its structure allows you to interactively explore the data and its modules contain the most cutting-edge techniques thanks to its wide international community. This distinctive feature of the R language makes it a preferred choice for developers who are looking to build recommendation systems.

The book will help you understand how to build recommender systems using R. It starts off by explaining the basics of data mining and machine learning. Next, you will be familiarized with how to build and optimize recommender models using R. Following that, you will be given an overview of the most popular recommendation techniques. Finally, you will learn to implement all the concepts you have learned throughout the book to build a recommender system.

## Style and approach

This is a step-by-step guide that will take you through a series of core tasks. Every task is explained in detail with the help of practical examples.

### **From reader reviews:**

#### **Curtis Miller:**

The book Building a Recommendation System with R make you feel enjoy for your spare time. You can utilize to make your capable considerably more increase. Book can to get your best friend when you getting strain or having big problem with the subject. If you can make examining a book Building a Recommendation System with R being your habit, you can get more advantages, like add your own capable, increase your knowledge about a few or all subjects. You could know everything if you like wide open and read a e-book Building a Recommendation System with R. Kinds of book are several. It means that, science book or encyclopedia or other folks. So , how do you think about this book?

#### **Lucille Daulton:**

Book is to be different for each and every grade. Book for children until adult are different content. To be sure that book is very important for all of us. The book Building a Recommendation System with R has been making you to know about other knowledge and of course you can take more information. It is quite advantages for you. The reserve Building a Recommendation System with R is not only giving you much more new information but also for being your friend when you really feel bored. You can spend your personal spend time to read your publication. Try to make relationship with the book Building a Recommendation System with R. You never experience lose out for everything in case you read some books.

#### **Roy Taylor:**

This Building a Recommendation System with R are usually reliable for you who want to become a successful person, why. The main reason of this Building a Recommendation System with R can be one of many great books you must have is usually giving you more than just simple examining food but feed anyone with information that might be will shock your prior knowledge. This book is actually handy, you can bring it just about everywhere and whenever your conditions throughout the e-book and printed versions. Beside that this Building a Recommendation System with R giving you an enormous of experience for instance rich vocabulary, giving you tryout of critical thinking that could it useful in your day action. So , let's have it appreciate reading.

#### **Rebecca Moreno:**

In this era which is the greater man or woman or who has ability to do something more are more valuable than other. Do you want to become considered one of it? It is just simple way to have that. What you need to do is just spending your time not very much but quite enough to enjoy a look at some books. One of many books in the top collection in your reading list is actually Building a Recommendation System with R. This book which can be qualified as The Hungry Hills can get you closer in turning into precious person. By looking up and review this publication you can get many advantages.
