Data Storage for Social Networks (SpringerBriefs in Optimization) Duc A. Tran

Evidenced by the success of Facebook, Twitter, and LinkedIn, online social networks (OSNs) have become ubiquitous, offering novel ways for people to access information and communicate with each other. As the increasing popularity of social networking is undeniable, scalability is an important issue for any OSN that wants to serve a large number of users. Storing user data for the entire network on a single server can quickly lead to a bottleneck, and, consequently, more servers are needed to expand storage capacity and lower data request traffic per server. Adding more servers is just one step to address scalability. The next step is to determine how best to store the data across multiple servers. This problem has been widely-studied in the literature of distributed and database systems. OSNs, however, represent a different class of data systems. When a user spends time on a social network, the data mostly requested is her own and that of her friends; e.g., in Facebook or Twitter, these data are the status updates posted by herself as well as that posted by the friends. This so-called social locality should be taken into account when determining the server locations to store these data, so that when a user issues a read request, all its relevant data can be returned quickly and efficiently. Social locality is not a design factor in traditional storage systems where data requests are always processed independently. Even for today's OSNs, social locality is not yet considered in their data partition schemes. These schemes rely on distributed hash tables (DHT), using consistent hashing to assign the users' data to the servers. The random nature of DHT leads to weak social locality which has been shown to result in poor performance under heavy request loads. Data Storage for Social Networks: A Socially Aware Approach is aimed at reviewing the current literature of data storage for online social networks and discussing new methods that take into account social awareness in designing efficient data storage.

From reader reviews:

Andrew Waite:

Information is provisions for individuals to get better life, information nowadays can get by anyone on everywhere. The information can be a knowledge or any news even a huge concern. What people must be consider any time those information which is inside the former life are difficult to be find than now's taking seriously which one is acceptable to believe or which one the particular resource are convinced. If you receive the unstable resource then you buy it as your main information we will see huge disadvantage for you. All those possibilities will not happen in you if you take Data Storage for Social Networks (SpringerBriefs in Optimization) as your daily resource information.

Jessica Keith:

The publication untitled Data Storage for Social Networks (SpringerBriefs in Optimization) is the publication that recommended to you you just read. You can see the quality of the publication content that will be shown to anyone. The language that publisher use to explained their way of doing something is easily to understand. The writer was did a lot of exploration when write the book, and so the information that they share to your account is absolutely accurate. You also could possibly get the e-book of Data Storage for Social Networks (SpringerBriefs in Optimization) from the publisher to make you much more enjoy free time.

Judy Bowen:

Playing with family inside a park, coming to see the ocean world or hanging out with pals is thing that usually you have done when you have spare time, subsequently why you don't try point that really opposite from that. One particular activity that make you not experience tired but still relaxing, trilling like on roller coaster you have been ride on and with addition details. Even you love Data Storage for Social Networks (SpringerBriefs in Optimization), you can enjoy both. It is very good combination right, you still want to miss it? What kind of hang-out type is it? Oh seriously its mind hangout folks. What? Still don't get it, oh come on its named reading friends.

Shelley Gavin:

Are you kind of occupied person, only have 10 or even 15 minute in your day time to upgrading your mind expertise or thinking skill even analytical thinking? Then you are having problem with the book when compared with can satisfy your small amount of time to read it because this all time you only find e-book that need more time to be go through. Data Storage for Social Networks (SpringerBriefs in Optimization) can be your answer given it can be read by a person who have those short time problems.
