Generalized Linear and Nonlinear Models for Correlated Data: Theory and Applications Using SAS Edward F. Vonesh

Edward F. Vonesh's Generalized Linear and Nonlinear Models for Correlated Data: Theory and Applications Using SAS is devoted to the analysis of correlated response data using SAS, with special emphasis on applications that require the use of generalized linear models or generalized nonlinear models. Written in a clear, easy-to-understand manner, it provides applied statisticians with the necessary theory, tools, and understanding to conduct complex analyses of continuous and/or discrete correlated data in a longitudinal or clustered data setting. Using numerous and complex examples, the book emphasizes realworld applications where the underlying model requires a nonlinear rather than linear formulation and compares and contrasts the various estimation techniques for both marginal and mixed-effects models. The SAS procedures MIXED, GENMOD, GLIMMIX, and NLMIXED as well as user-specified macros will be used extensively in these applications. In addition, the book provides detailed software code with most examples so that readers can begin applying the various techniques immediately.

From reader reviews:

Justin Moore:

With other case, little men and women like to read book Generalized Linear and Nonlinear Models for Correlated Data: Theory and Applications Using SAS. You can choose the best book if you appreciate reading a book. Provided that we know about how is important any book Generalized Linear and Nonlinear Models for Correlated Data: Theory and Applications Using SAS. You can add expertise and of course you can around the world by the book. Absolutely right, mainly because from book you can recognize everything! From your country right up until foreign or abroad you will find yourself known. About simple matter until wonderful thing it is possible to know that. In this era, we can easily open a book or perhaps searching by internet unit. It is called e-book. You need to use it when you feel weary to go to the library. Let's learn.

Pamela Garcia:

A lot of people always spent their own free time to vacation or perhaps go to the outside with them loved ones or their friend. Did you know? Many a lot of people spent they will free time just watching TV, or playing video games all day long. If you wish to try to find a new activity honestly, that is look different you can read the book. It is really fun for you. If you enjoy the book you read you can spent 24 hours a day to reading a guide. The book Generalized Linear and Nonlinear Models for Correlated Data: Theory and Applications Using SAS it is quite good to read. There are a lot of those who recommended this book. These folks were enjoying reading this book. In case you did not have enough space to create this book you can buy the particular e-book. You can m0ore quickly to read this book from your smart phone. The price is not to fund but this book features high quality.

Edward Carroll:

Don't be worry when you are afraid that this book can filled the space in your house, you can have it in e-book way, more simple and reachable. That Generalized Linear and Nonlinear Models for Correlated Data: Theory and Applications Using SAS can give you a lot of pals because by you taking a look at this one book you have factor that they don't and make anyone more like an interesting person. This kind of book can be one of a step for you to get success. This e-book offer you information that probably your friend doesn't understand, by knowing more than other make you to be great folks. So, why hesitate? Let me have Generalized Linear and Nonlinear Models for Correlated Data: Theory and Applications Using SAS.

Justin Belz:

Reading a guide make you to get more knowledge from this. You can take knowledge and information originating from a book. Book is created or printed or highlighted from each source this filled update of news. In this modern era like today, many ways to get information are available for a person. From media social such as newspaper, magazines, science e-book, encyclopedia, reference book, novel and comic. You

can add your knowledge by that book. Do you want to spend your spare time to open your book? Or just searching for the Generalized Linear and Nonlinear Models for Correlated Data: Theory and Applications Using SAS when you essential it?
