Visualization for Information Retrieval: 23 (The Information Retrieval Series) Jin Zhang
The amount of digitized information available on the Internet, in digital libraries, and other forms of information systems grows at an exponential rate, while becoming more complex and more dynamic. As a consequence, information organization, information retrieval and the presentation of retrieval results have become more and more difficult. Information visualization offers a unique method to reveal hidden patterns and contextual information in a visual presentation and allows users to seek information in an intuitive way. Jin Zhang provides a systematic explanation of the latest advancements in information retrieval visualization from both theoretical and practical perspectives. He reviews the main approaches and techniques available in the field, explains theoretical relationships between information retrieval and information visualization, and presents major information retrieval visualization algorithms and models. He then takes a detailed look at the theory and applications of information retrieval visualization for Internet traffic analysis, and Internet information searching and browsing. The author also addresses challenges such as ambiguity, metaphorical applications, and system evaluation in information retrieval visualization environments. Finally, he compares these information retrieval visualization models from the perspectives of visual spaces, semantic frameworks, projection algorithms, ambiguity, and information retrieval, and discusses important issues of information retrieval visualization and research directions for future exploration. Readers of this book will gain an in-depth understanding of the current state of information retrieval visualization. They will be introduced to existing problems for researchers and professionals, along with technical and theoretical findings and advances made by leading researchers. The book also provides practical details for the implementation of an information retrieval visualization system.

From reader reviews:

Karen Bell:

What do you ponder on book? It is just for students since they're still students or it for all people in the world, exactly what the best subject for that? Just simply you can be answered for that issue above. Every person has different personality and hobby for every single other. Don't to be pushed someone or something that they don't want do that. You must know how great and also important the book Visualization for Information Retrieval: 23 (The Information Retrieval Series). All type of book would you see on many sources. You can look for the internet resources or other social media.

Jordan Sena:

Do you considered one of people who can't read pleasant if the sentence chained from the straightway, hold on guys that aren't like that. This Visualization for Information Retrieval: 23 (The Information Retrieval Series) book is readable by means of you who hate the perfect word style. You will find the information here are arrange for enjoyable reading through experience without leaving even decrease the knowledge that want to provide to you. The writer of Visualization for Information Retrieval: 23 (The Information Retrieval Series) content conveys objective easily to understand by a lot of people. The printed and e-book are not different in the articles but it just different such as it. So , do you still thinking Visualization for Information Retrieval: 23 (The Information Retrieval Series) is not loveable to be your top record reading book?

Julia Sullivan:

This book untitled Visualization for Information Retrieval: 23 (The Information Retrieval Series) to be one of several books that best seller in this year, here is because when you read this publication you can get a lot of benefit in it. You will easily to buy this particular book in the book retailer or you can order it via online. The publisher of the book sells the e-book too. It makes you quicker to read this book, since you can read this book in your Mobile phone. So there is no reason for you to past this guide from your list.

Tyler Dean:

A lot of people always spent their very own free time to vacation or maybe go to the outside with them family or their friend. Were you aware? Many a lot of people spent many people free time just watching TV, as well as playing video games all day long. If you wish to try to find a new activity that's look different you can read any book. It is really fun to suit your needs. If you enjoy the book you read you can spent all day every day to reading a guide. The book Visualization for Information Retrieval: 23 (The Information Retrieval Series) it is quite good to read. There are a lot of those who recommended this book. These people were enjoying reading this book. In the event you did not have enough space to deliver this book you can buy the actual e-book. You can m0ore easily to read this book out of your smart phone. The price is not too costly but this book provides high quality.
