Lasers and Holography (Dover Books Explaining Science)

Winston E. Kock

Lasers and Holography (Dover Books Explaining Science) Winston E. Kock

As the words *holo* (complete) and *gram* (message) connote, the hologram captures the entire message of a scene in all its visual properties, including the realism of three dimensions. It involves the simple process of photographically recording the pattern formed by two interfering sets of light waves, one of these sets being a reference wave. With the introduction of lasers to holography in 1963, real advances in the development of holography began to take place.

Dr. Kock's lucid introduction to lasers and holography has now been revised and updated for a second edition. It begins with a clear discussion of wave patterns and coherence. Then the development of lasers is summarized, along with the phenomenon of wave diffraction. Finally, the important subjects of zone plates and the properties of holograms are skillfully described. A new, concluding chapter brings the story up to the present, with a survey of recent advances in such areas as viewing holograms, hologram computer memories, liquid surface holography, synthetic-aperture radar and sonar, large new lasers, fiber optics, etc.

Using language that can be readily understood by high school and junior high school students, Dr. Kock has written a brief, yet authoritative volume that should satisfy anyone's curiosity about this burgeoning field.

The remarkable discoveries that have already occurred are only a prelude to an even more remarkable future. 84 illustrations, including 8 new to this edition. New preface. Suggested (1981) additional reading. Index.

From reader reviews:

Roy Stoudt:

What do you regarding book? It is not important together with you? Or just adding material if you want something to explain what the ones you have problem? How about your extra time? Or are you busy individual? If you don't have spare time to do others business, it is make one feel bored faster. And you have extra time? What did you do? Everyone has many questions above. They need to answer that question due to the fact just their can do this. It said that about publication. Book is familiar on every person. Yes, it is right. Because start from on guardería until university need this specific Lasers and Holography (Dover Books Explaining Science) to read.

Danielle Hawkins:

As people who live in often the modest era should be revise about what going on or facts even knowledge to make these individuals keep up with the era which can be always change and move ahead. Some of you maybe will certainly update themselves by studying books. It is a good choice for you but the problems coming to anyone is you don't know what kind you should start with. This Lasers and Holography (Dover Books Explaining Science) is our recommendation to make you keep up with the world. Why, because book serves what you want and want in this era.

Heidi Crenshaw:

This book untitled Lasers and Holography (Dover Books Explaining Science) to be one of several books in which best seller in this year, this is because when you read this reserve you can get a lot of benefit on it. You will easily to buy this book in the book retail outlet or you can order it by means of online. The publisher in this book sells the e-book too. It makes you more easily to read this book, since you can read this book in your Touch screen phone. So there is no reason to your account to past this book from your list.

Karen Delamora:

Reading a book to be new life style in this season; every people loves to go through a book. When you go through a book you can get a large amount of benefit. When you read textbooks, you can improve your knowledge, due to the fact book has a lot of information upon it. The information that you will get depend on what kinds of book that you have read. If you need to get information about your analysis, you can read education books, but if you act like you want to entertain yourself read a fiction books, this kind of us novel, comics, as well as soon. The Lasers and Holography (Dover Books Explaining Science) provide you with a new experience in examining a book.
